

DIKE CONTAINMENT SYSTEM

Closed Top Dike System (Dike with Integral Rain Shield)

The Dike Containment System offered by Modern Welding Company is manufactured in strict accordance with UL and / or the Steel Tank Institute standards. The impermeable steel containment dike is sized to contain 110% of the capacity of the tank it protects. Larger secondary containment capacities available. Dike sizes up to 22,000 gallons can be manufactured.

Modern's also offers diked containment without rain shields. This is another quality addition to the Modern secondary containment product Line. The solid construction of the UL 142 single wall steel aboveground storage tank in conjunction with the diked containment make for a timely, convenient installation. Additionally, Modern's UL 142 double wall steel aboveground storage tank can be combined with the diked containment for unsurpassed triple protection.

Multiple Tank Dike System
